# Technical Information

On the following pages you will find a summary with important details and instructions, which will enable you to find information quickly and easily. You will find a detailed chapter of important standards, copper and alu-price calculation, core identifications, permissible bending radius, dimensions, power ratings, comparison of harmonized cables, strand make-up and conductor resistance, laying conditions for power cables, chemical resistance of PUR, Silicone, Teflon and other thermoplastic materials, characteristics of insulating and sheath materials, caloric load values of halogen-free or halogenated cables, information and laying conditions for UL-CSA cables and wires, international abbreviations, formulas and practical facts etc.

It goes without saying that we can only mention a fraction of all specifications as well as of the VDE-instructions. If you require the complete VDE specifications, please ask the VDE-Publishing House in Berlin.

For any information please ask our Quality Assurance department.

Any questions? HELUKABEL® will help you!
